CSL202

Date: 09.10.2025 Quiz Set-A

Question 1:
Trace the working of Quick Sort for the array: [65,70,75,80,85,60,55,50,45] assuming the first element as pivot.

Question 2:

Given two sorted lists L1 and L2 having number of elements n1 and n2 respectively. The minimum and maximum number of comparisons needed to merge them to get a single sorted list(n1+n2) is. (n1 <= n2)

Question 3:

Write pseudocode of Quick Sort (non recursive).

Date: 09.10.2025 Quiz Set-B

Question 1:

Trace the working of Quick Sort for the array: [65,70,75,80,85,60,55,50,45] assuming the first element as pivot.

Question 2:

What is the worst case for quick sort and it's time complexity in worst case?

Question 3:

Write pseudocode of Merge Sort and also write the time complexity of merge sort (non recursive).
