C – SYLLABUS

1. C – Introduction
2. History
3. Fundamentals
4. Programming structure
5. Printf, variables, scanf
6. Control structures / control statements If, if..else, if…else if ladder, nested if, switch, while, do..while, for, goto label
7. Arrays
8. strings
9. Pointers
10. Dynamic memory allocation
11. User defined functions
12. Recursion
13. Storage classes
14. Preprocessor
15. Structure
16. Union
17. Enum
18. Typedef
19. File handling with project work
20. Command line arguments

Fee Details:

Rs : 2,000/- INR (Without videos means you will get Live sections & Class Notes Only)

Rs : 4,000/- INR (With videos means you will get Live sections, Recorded Videos & Class Notes)

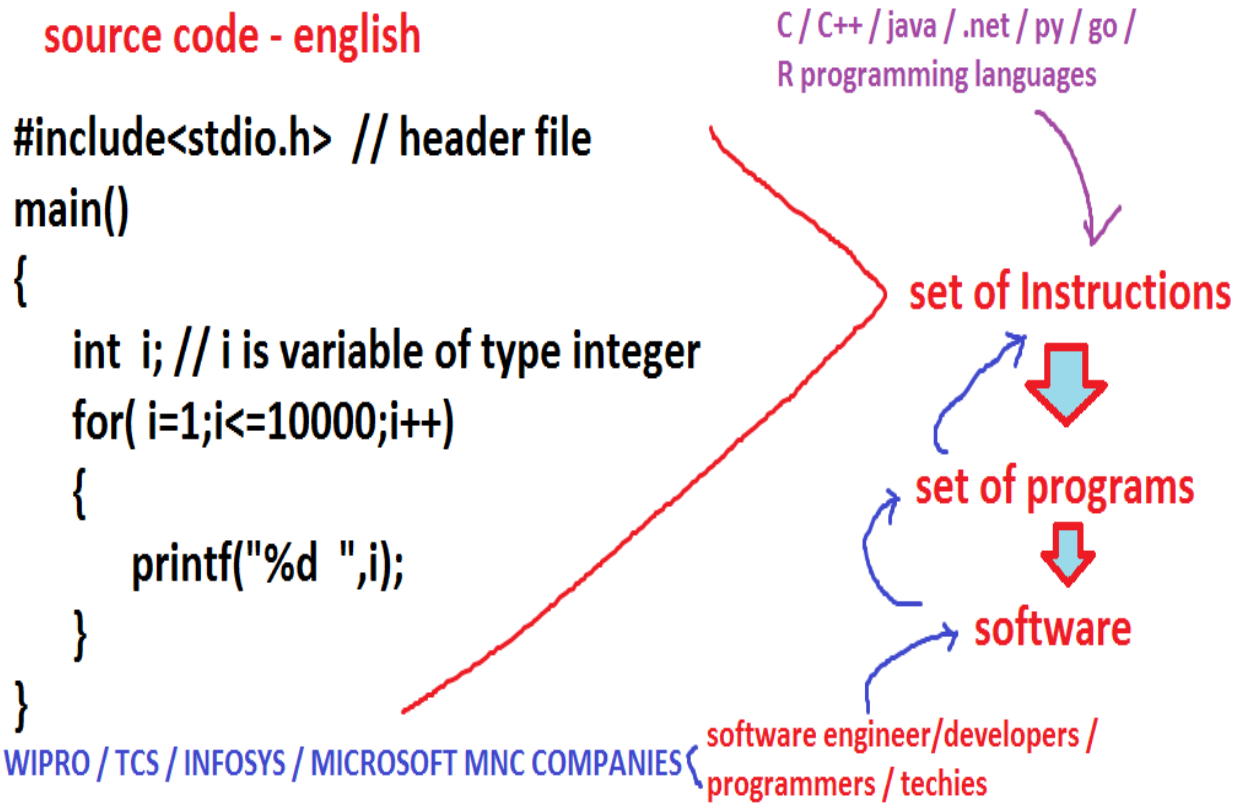

Duration : 2 months.

(Videos validity including course duration + 6 months)

INTRODUCTION TO C

C is a

1. **It is a high level / middle level programming language.**

What is a program?

Set of instructions are called program.

What is a software?

Set of program is called software.

Again the software is divided into 2 types.

1. **System software**
   Eg: operating system, device drivers, translators
2. **Application software.**
   Eg: whatsapp, fb, instagram,googlepay,….

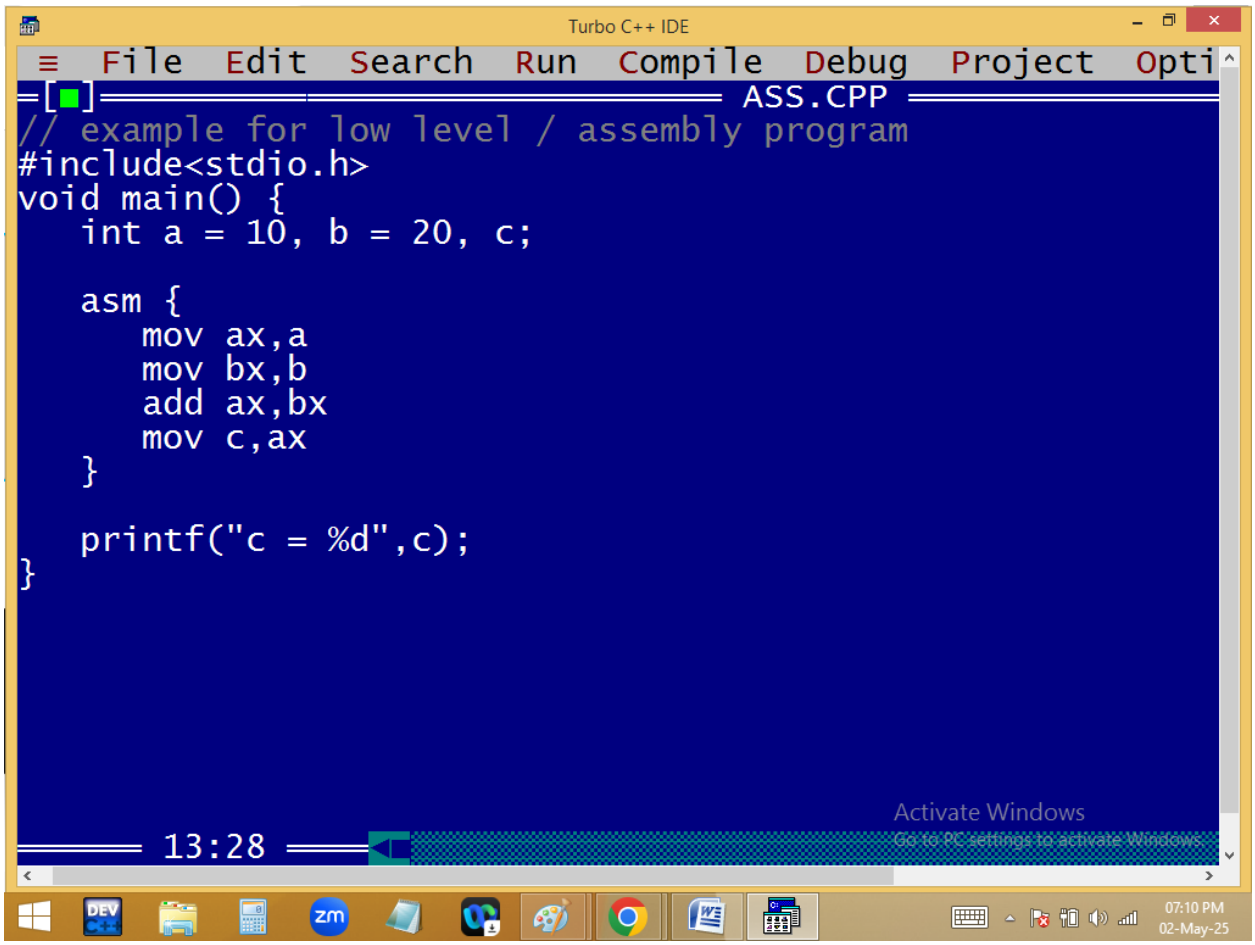

What is a language?

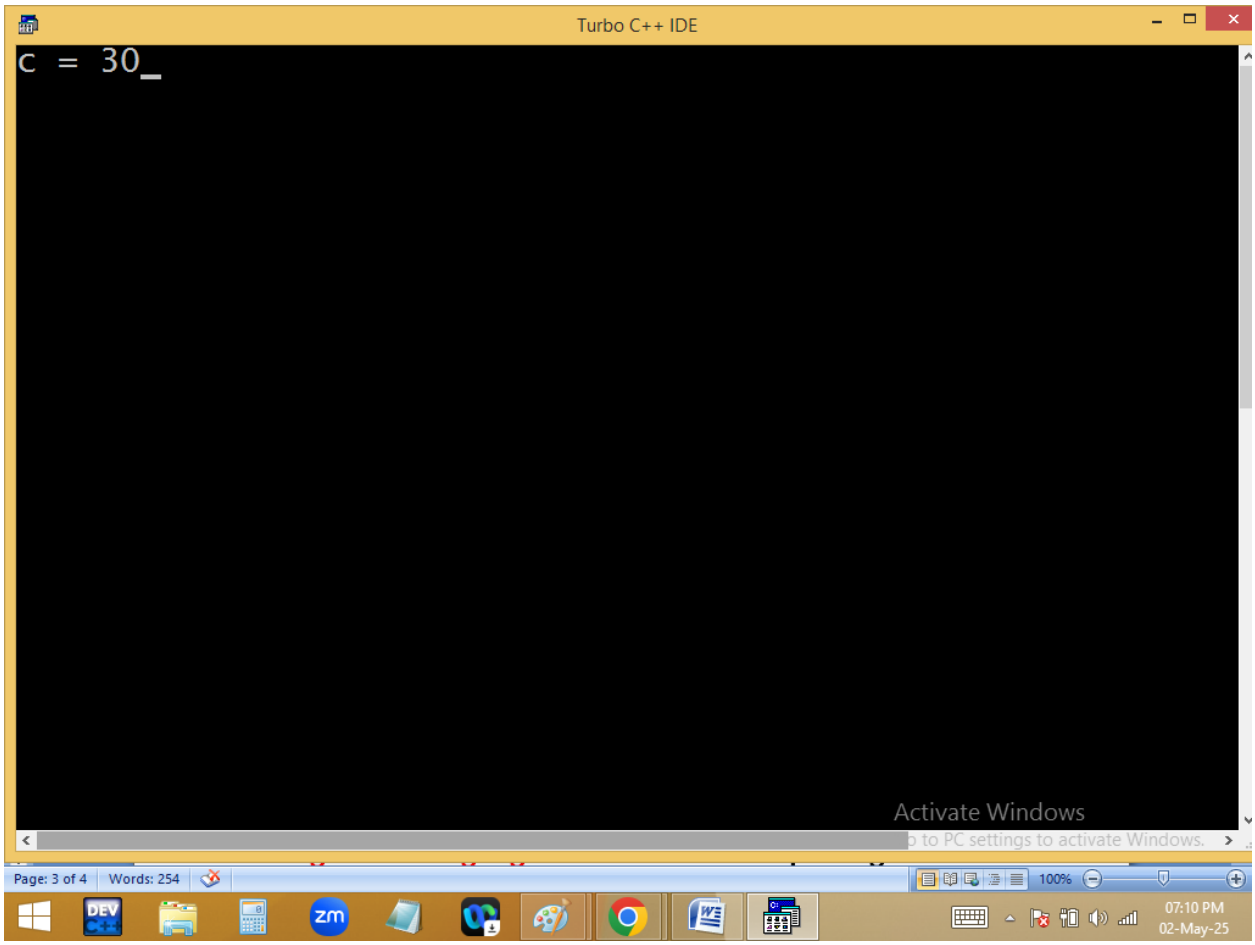

Generally the languages are used to communicate with others. For example the languages like telugu / English / hindi / Marathi etc are called human languages and which are used to communicate with the humans.

To communicate with the machines / computers are using the programming languages like C / C++ / java / .net / py etc. by using these languages we can create the software [programs] to communicate with the machines , which are doing our work in easy , efficiency way.

Basically the languages divided into 3 types.

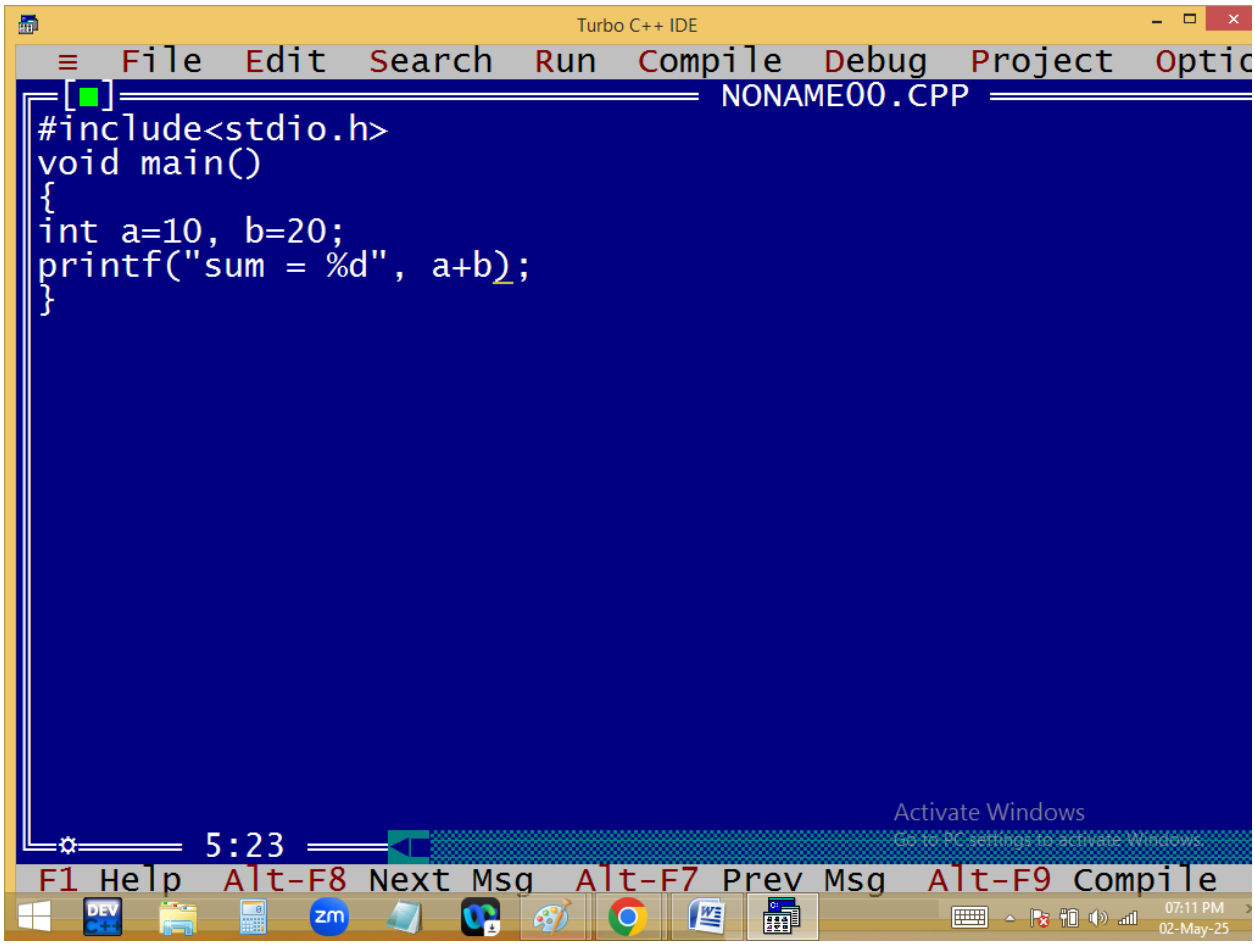

1. **Machine language / binary code: Created with binary code and very difficult for humans.**
   Eg: 10001111
2. **Low level / assembly language: Created with English like shortcuts called MNEMONICS.**
   Eg: gd evng, sub, add,..

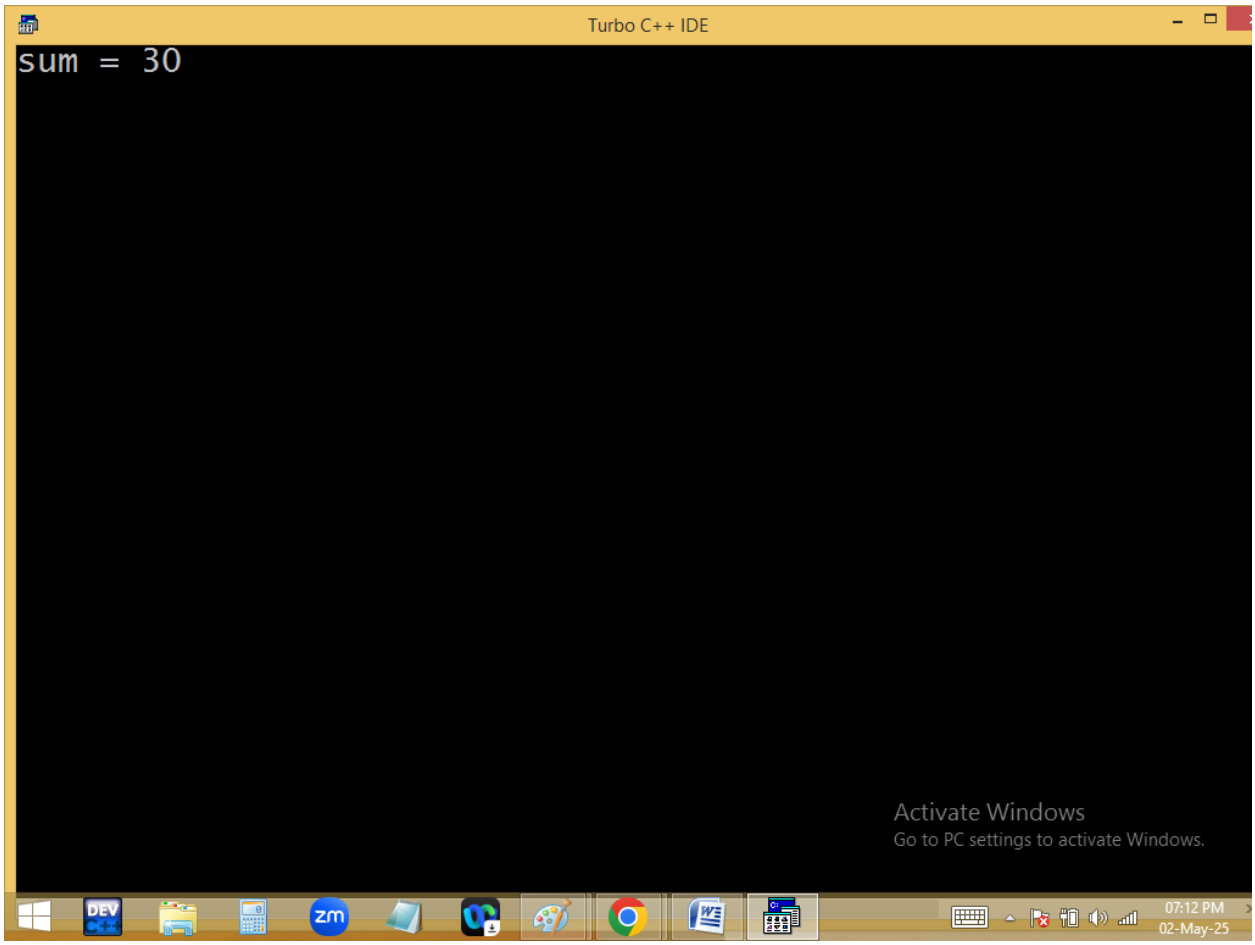

Turbo C++ IDE
File Edit Search Run Compile Debug Project Opti
ASS.CPP
// example for low level / assembly program
#include<stdio.h>
void main() {
int a = 10, b = 20, c;
asm {
mov ax,a
mov bx,b
add ax,bx
mov c,ax
}
printf("c = %d",c);
}
13:28
Activate Windows
Go to PC settings to activate Windows.

02-May-25

3. **High level language: Created with simple English and easy to understand.**

   Eg: good evening, subject, address,….

Turbo C++ IDE
File Edit Search Run Compile Debug Project Optic
NONAME00.CPP
#include<stdio.h>
void main()
{
int a=10, b=20;
printf("sum = %d", a+b);
}
5:23
Activate Windows
Go to PC settings to activate Windows.

C is basically high level language with low level features. Hence it is called middle level language also.

C low level features are used to design system software and high level features used to design application software. Hence c is a multi-purpose programming language.
