HISTORY OF C – SEA - OCEAN

Basically the C language introduced in 1972 by "DENNIS RITCHIE", one of the programmer in AT & T [American Telephone and Telegraph] Bell labs, located at Murray hills, New jersy, USA.

C language adopted from B language, designed by "KEN THOMSON", one of the software engineer in AT & T Bell labs.

B language adopted from BCPL [Basic Combined Programming Language], developed by an Assistant professor in Cambridge university named "MARTIEN RICHARDS".

In 1989 ANSI [American National Standard Institute] released a new version of C language with the name "ANSI-C", which is familiar with the name "C-89".

In 1999 ISO [International Standard Organization] released a new version of C language with the name "C-99".

Basically C language designed to rewrite the UNIX operating system.

Nowadays we can create and execute a c program on any machine with any processor. i.e. we can run the program on 80386 / 80486 / 80586 / intel core i3 / i5 / i7 amd processor etc. Hence c is called it is a machine independent programming language.

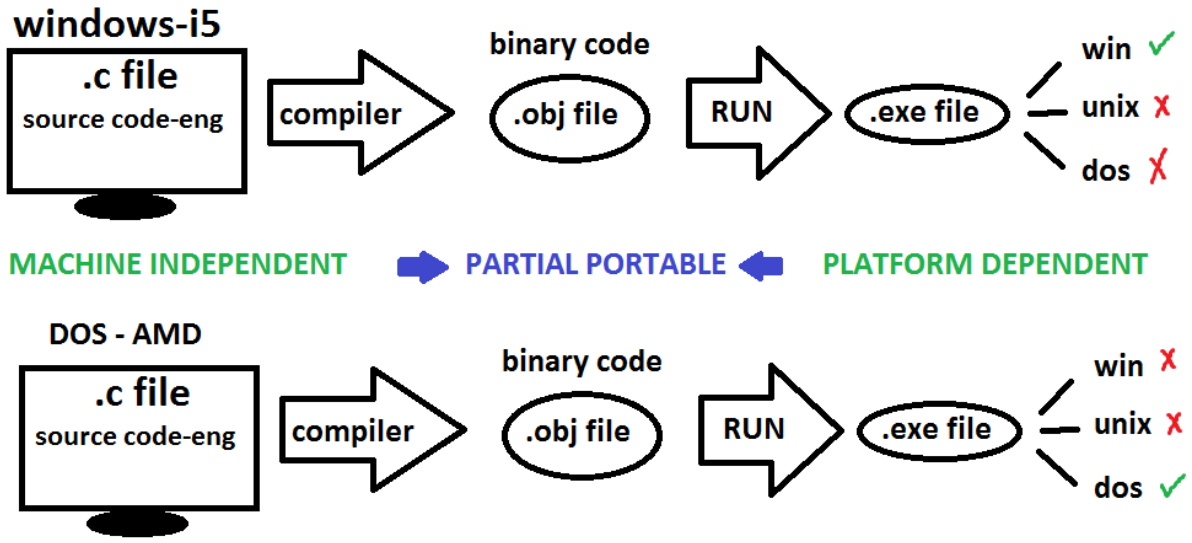

For example the languages like 8086 / 8088 working only on 8086 and 8088 processors. Hence they are called machine dependent programming languages.

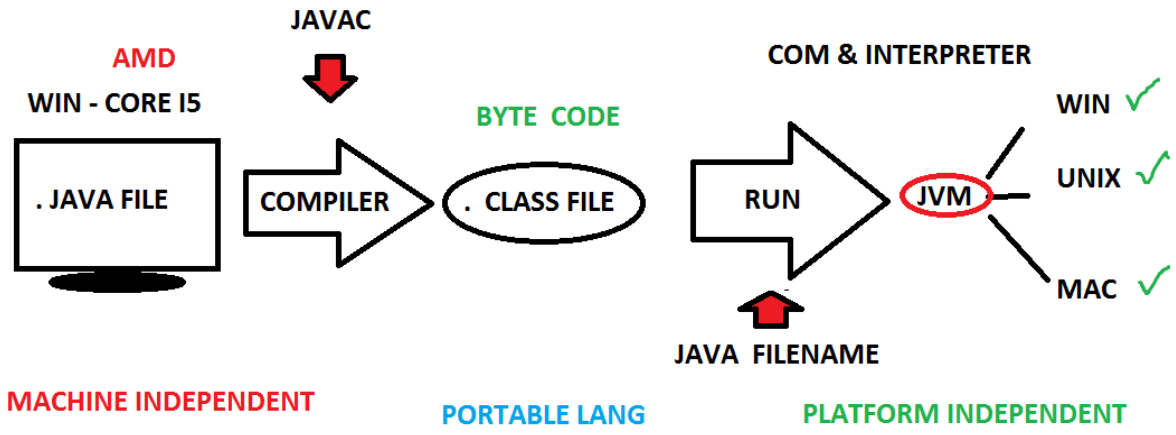

But C is a platform dependent programming language. i.e. the C program designed for one operating system is not working in another type of operating system. For example the program designed for windows is not working UNIX operating system. Because of platform dependent, C doesn't allows to develop web applications. By using C language we can develop only the standalone applications. The standalone applications installed in a single computer and accessed from that single computer only. By default our system is a standalone app.

Eg: calc, ms-office, antivirus, mediaplayer,…

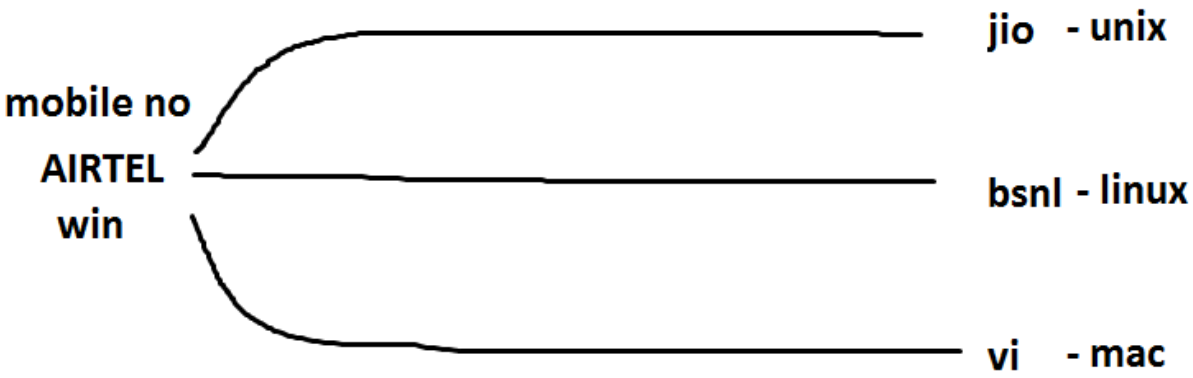

To design web applications we are using the language like java / .net / py etc because of all these languages are platform independent programming languages. i.e. the java application designed for windows operating system is working on unix / linux / ubantu / mac etc. hence all these languages are called portable languages.

C is machine independent but platform dependent. Hence c is a partial portable language.

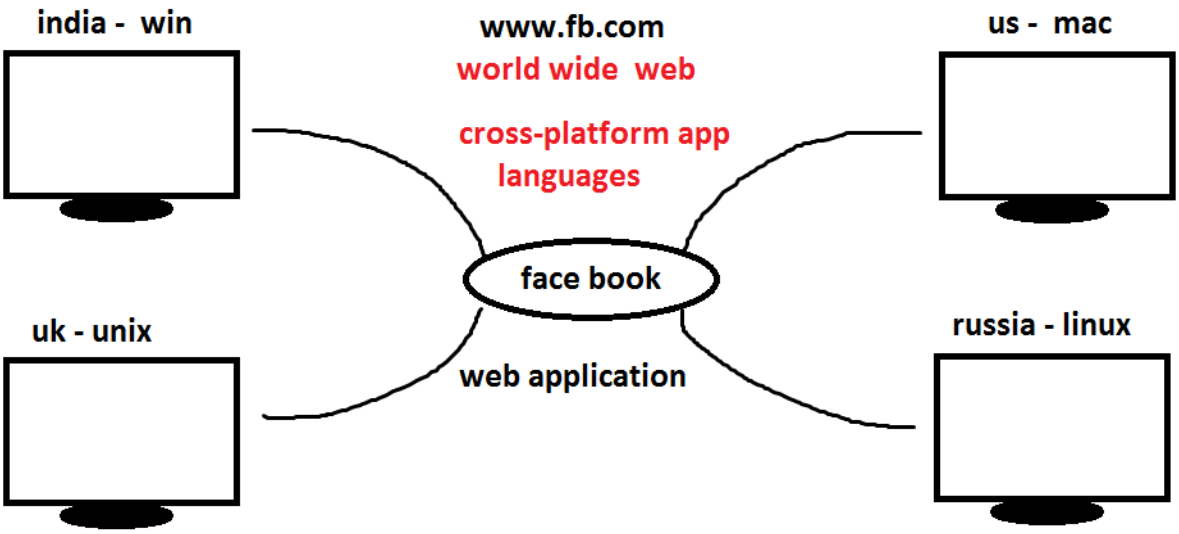

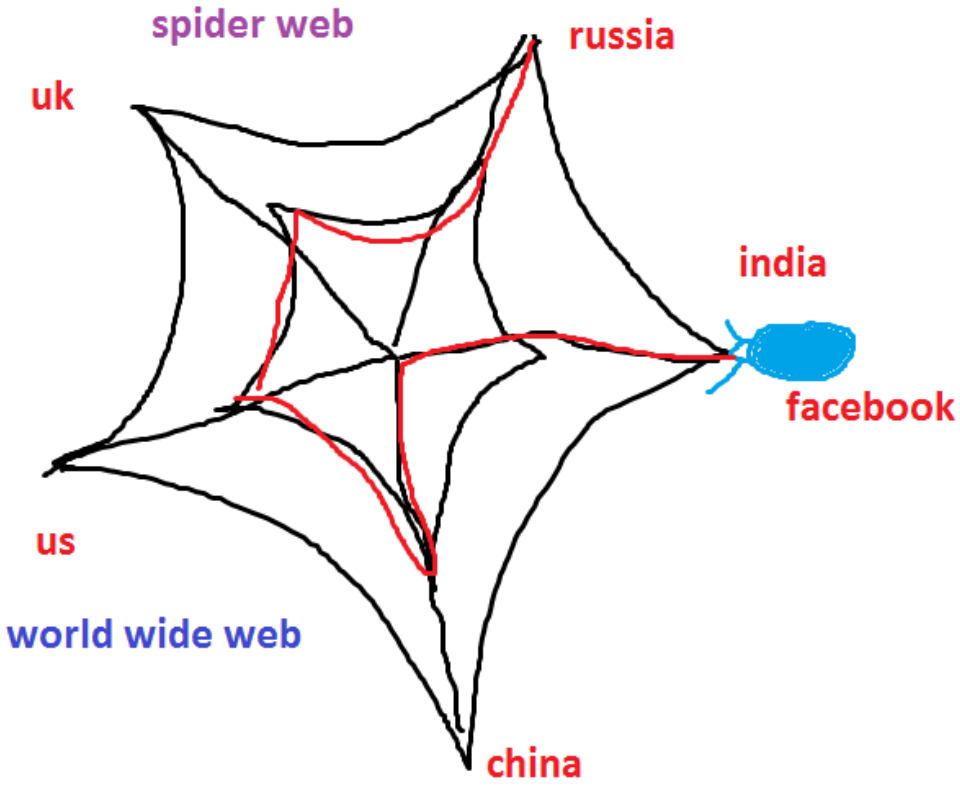

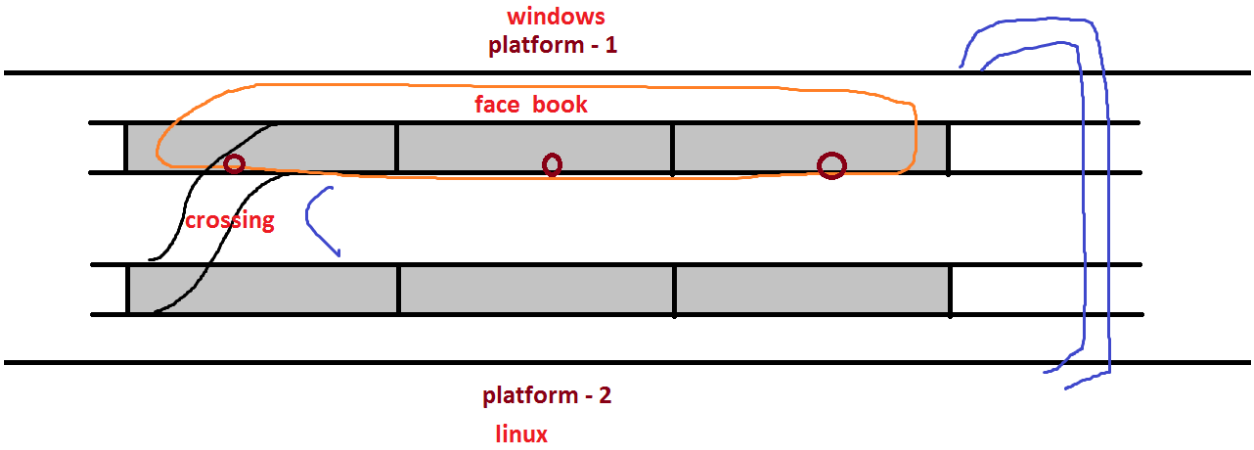

M N P - MOBILE NO PORTABILITY

java - WORA - Write Once and Run Any Where

india - win

From Naveen NiT to everyone: 7:06 PM

C Language @ 6:00 PM (IST) by Mr. Kishore sir

Fee Details:

Rs : 2,000/- INR (With out videos means you will get Live sections & Class Notes)

Rs : 4,000/- INR (With videos means you will get Live sections, Recorded Videos & Class Notes)

Duration : 2 months.

(Videos validity including course duration + 6 months)

Note : Videos only used to watch and practice No Download Option

Once Fee Paid Won't Get Refund

from Naveen NiT to everyone: 7:06 PM

Payment Link: https://rzp.io/l/NareshITech
(Credit card , Phone pe , Google pay, Paytm)
(OR)
Bank Details :
Name: Naresh i Technologies
A/C No. 50200022639833
Bank: HDFC
A/C Type: Current Account
IFSC Code: HDFC0001627
MICR Code: 500240035
Branch Code: 001627
Branch: Ameerpet

Once Your payment done please send me your payment screenshot
