DATA TYPES

To store anything in our system we should have to allocate the memory [bytes]. The memory having 3 properties.

1. **What type of data we want to store in that memory.**
2. **No of bytes required**
3. **Value range**

These properties decided by the data type.

Int Sal = 30000; ← non decimal number

Int takes 2 bytes in 16 bit compiler and 4 bytes in 32 bit compiler.

%d – conversion character / format specifier

Short int / Signed int / Int storage capacity

-32768 to +32767

2^{16} ➔ 65536

Java compiler size 32 bit. 2^{32} ➔ 4294967296 ➔ -2147483648 to +2147483647

unsigned int sal = 58000;

unsigned int ➔2 bytes ➔ 0 to 65535 ➔ %u

long int sal = 350000;

signed long int ➔ 4 bytes ➔ %ld ➔

-2147483648 to +2147483647

Unsigned long int ➔ 0 to 4294967295 ➔ %ul ➔ 4 bytes

C Language @ 6:00 PM (IST) by Mr. Kishore sir

Fee Details:
Rs : 2,000/- INR (With out videos means you will get Live sections & Class Notes)

Rs : 4,000/- INR (With videos means you will get Live sections, Recorded Videos & Class Notes)
Duration : 2 months.

(Videos validity including course duration + 6 months)
Note : Videos only used to watch and

practice No Download Option

Once Fee Paid Won't Get Refund

from Naveen NiT to everyone: 7:03 PM

Payment Link:
https://rzp.io/l/NareshITech
(Credit card , Phone pe , Google pay, Paytm)

(OR)

Bank Details :
Name: Naresh i Technologies
