Monday Lab Assignment

1. User Input and Output:
    a. • Write a program that asks the user to input their age, height (in meters), and the first letter of their name. Print these values using printf.
2. String Input and Output:
    a. Write a program that uses scanf to read a string from the user and then uses printf to print the string.
3. Calculating Area:
    a. • Write a C program that takes the radius of a circle as input from the user and calculates the area. Use float data type for radius and area. Print the result with two decimal places.
4. Simple Interest Calculation:
    a. Write a C program that takes principal, rate of interest, and time (in years) as input, and calculates the simple interest. Use float data type and print the result.
5. Sum of Two Integers:
    a. • Create a program that takes two integers as input using scanf and prints their sum.
6. Swapping Two Numbers:
    a. Write a program that swaps two integers provided by the user and prints the swapped values.
